

DESCRIPTION

Guide ring strip to fit cut to size or by meter

MATERIAL

Type: Polytetrafluoroethylene + Bronze
Designation: SEALFLON + Bronze

MAIN FEATURES

The MRB type guide rings have been developed to substitute traditional bronze guides in hydraulic cylinders. They guide the rod or the piston and prevent metallic contact with the cylinder when radial forces act perpendicular to the direction of movement.

Since MRB guide rings are machined, the thickness can be very accurate for high precision guiding.

The compound used for these guides assures exceptional low friction and high speed performance, high compatibility with nearly all media due to the chemical resistance which exceeds that of all other thermoplastics and elastomers.

- Low static and dynamic friction (also without lubrication)
- High speed allowed
- No tendency of stick-slip
- High precision of guiding
- Good damping on radial vibration
- High compatibility with nearly all fluids
- Simple design of groove and assembly
- Good mechanical stability at high temperature
- Easy installation without expensive auxiliaries
- Low resistance to heavy loads

FIELD OF APPLICATION

| | |
|-------------|---|
| Speed | ≤ 5 m/s |
| Temperature | -50°C ÷ +200°C |
| Fluids | High compatibility with nearly all media due to the chemical resistance of the material |

SURFACE ROUGHNESS

| | | |
|-----------------|-------------|-------------|
| Dynamic surface | Ra ≤ 0.3 μm | Rt ≤ 2.5 μm |
| Static surface | Ra ≤ 1.6 μm | Rt ≤ 6.3 μm |

CHOICE OF GUIDE RING WIDTH

A rough estimate of guide width can be calculated with the following formula:

$$h_{mm} \geq \frac{F_N \times k}{p_{N/mm^2} \times d_{mm}}$$

where

| | |
|--------------|--|
| h_{mm} | • guide ring width in mm |
| F_N | • radial load in N |
| k | • safety factor (<i>generally 2</i>) |
| d_{mm} | • diameter in mm |
| p_{N/mm^2} | • surface pressure N/mm ² |
| | 14 a 20 °C |
| | 7 a 80 °C |
| | 5 a 120 °C |

- Before assembly good cleanliness and guides lubrication are recommended.
